

## Why return 0;

**what is the meaning or use of return 0; here and what will happen if we don't use return 0 in our code.**

when a program is ending it should return 0.

It is like a standard in C++ programs, it must be written.  
return 0; means program has terminated successfully.

In some compiler program may run without return 0; also.

## Why return 0;

**what is the meaning or use of return 0; here and what will happen if we don't use return 0 in our code.**

when a program is ending it should return 0.

It is like a standard in C++ programs, it must be written.  
return 0; means program has terminated successfully.

In some compiler program may run without return 0; also.

## How to read multiple words?

**How to read multiple words in a name?**

if you want to read more than one word, then use getline.

Include a header file `#include<string>` or `#include<cstring>`

```
getline(cin,name);
```

## Difference between int main() and void main()

In C++ int main() is standard.

Some compiler allow void main() also.

## **It is mandatory to write return 0; ?**

It is better to write return 0;

Some compilers may compile the program without return 0; also.
